

AI24BTECH11019-KOTHA PRATHEEK REDDY

- 1) A uniform disk of mass 1 kg and radius 0.1 m is kept on a surface as shown in the figure. A spring of stiffness $k_1 = 400\text{ N/m}$ is connected to the disk center A and another spring of stiffness $k_2 = 100\text{ N/m}$ is connected at point B just above point A on the circumference of the disk. For small disturbance from the equilibrium, the natural frequency of vibration of the system is _____ rad/s (round off to one decimal place).

[Gate 2019]

- 2) A single block brake with a short shoe torque capacity of 250 N.m is shown. The cylindrical brake drum rotates anticlockwise at 100 rpm and the coefficient of friction is 0.25 . The value of a , in mm (round off to one decimal place), such that the maximum actuating force P is 2000 N , is _____

[Gate 2019]

- 3) Two immiscible, incompressible, viscous fluids having same densities but different viscosities are contained between two infinite horizontal parallel plates, $2m$ apart as shown below. The bottom plate is fixed and the upper plate moves to the right with a constant velocity of $3m/s$. With the assumptions of Newtonian fluid, steady, and fully developed laminar flow with zero pressure gradient in all directions, the momentum equations simplify to

$$\frac{d^2 u}{dy^2} = 0; \quad (3.1)$$

If the dynamic viscosity of the lower fluid, μ_2 , is twice that of the upper fluid, μ_1 , then the velocity at the interface (round off to two decimal places) is _____ m/s .

[Gate 2019]

- 4) A cube of side $100mm$ is placed at the bottom of an empty container on one of its faces. The density of the material of the cube is $800kg/m^3$. Liquid of density $1000kg/m^3$ is now poured into the container. The minimum height to which the liquid needs to be poured into the container for the cube to just lift up is _____ mm .
[Gate 2019]

- 5) Three slabs are joined together as shown in the figure. There is no thermal contact resistance at the interfaces. The center slab experiences a non-uniform internal heat generation with an average value to $10000Wm^{-3}$, while the left and right slabs have no internal heat generation. All slabs have thickness equal to $1m$ and thermal conductivity of each slab is equal to $5Wm^{-1}K^{-1}$. The two extreme faces are exposed

to fluid with heat transfer coefficient $100\text{Wm}^{-2}\text{K}^{-1}$ and bulk temperature 30°C as shown. The heat transfer in the slabs is assumed to be one dimensional and steady, and all properties are constant. If the left extreme face temperature T_1 is measured to be 100°C , the right extreme face temperature T_2 is _____ $^\circ\text{C}$. [Gate 2019]

- 6) If one mole of H_2 gas occupies a rigid container with a capacity of 1000 litres and the temperature is raised from 27°C to 37°C , the change in pressure of the contained gas(round off to two decimal places), assuming ideal gas behaviour, is _____ Pa . ($R = 8.314\text{J/mol.K}$) [Gate 2019]
- 7) A steam power cycle with regeneration as shown below on the $T-s$ diagram employs a single open feedwater heater for efficiency improvement. The fluids mix with each other in an open feedwater heater. The turbine is isentropic and the input(bleed) to the feedwater heater from the turbine is at state 2 as shown in the figure. Process 3-4 occurs in the condenser. The pump work is negligible. The input to the boiler at state 5. The following information is available from the stream tables: ; The mass

State	1	2	3	4	5	6
Enthalpy(kJ/kg)	3350	2800	2300	175	700	1000

flow rate of steam bled from the turbine as a percentage of the total mass flow rate at the inlet to the turbine at state 1 is _____ [Gate 2019]

- 8) A gas turbine with air as the working fluid has an isentropic efficiency of 0.70 when operating at a pressure ratio of 3. Now the pressure ratio of the turbine is increased to 5, while maintaining the same inlet conditions. Assume air as a perfect gas with specific heat ratio $\gamma = 1.4$. If the specific work output remains the same for both the cases, the isentropic efficiency of the turbine at the pressure ratio of 5 is _____ (round off to two decimal places) [Gate 2019]
- 9) The value of the following definite integral is _____ (round off to two decimal

places)

$$\int_1^e (x \ln x) dx$$

[Gate 2019]

- 10) In ASA system, the side cutting and end cutting edge angles of a sharp turning tools are 45° and 10° , respectively. The feed during cylindrical turning is 0.1 mm/rev . The center line average surface roughness(in μm , round off to one decimal place) of the generated surface is _____.
- [Gate 2019]
- 11) Taylor's tool life equation is given by $VT^n = C$, where V is in m/min and T is in min . In a turning operation, two tools X and Y are used. For tool X , $n = 0.3$ and $C = 60$ and for tool Y , $n = 0.6$ and $C = 90$. Both the tools will have the same tool life for the cutting speed(in m/min , round off to one decimal place) of _____
- [Gate 2019]
- 12) Five jobs ($J1, J2, J3, J4, J5$) need to be processed in a factory. Each job can be assigned to any of the five different machines ($M1, M2, M3, M4, M5$). The time durations taken(in minutes) by machines for each of the jobs, are given in the table. However each job is assigned to a specific machine in such a way that the total processing time is minimum. The total processing time is _____ minutes.
- [Gate 2019]

	$M1$	$M2$	$M3$	$M4$	$M5$
$J1$	40	30	50	50	58
$J2$	26	38	60	26	38
$J3$	40	34	28	24	30
$J4$	28	40	40	32	48
$J5$	28	32	38	22	44

- 13) A project consists of six activities. The immediate predecessor of each activity and the estimated duration is also provided in the table below:

If all activities other than S take the estimated amount of time, the maximum

Activity	Immediate predecessor	Estimated duration(weeks)
P	-	5
Q	-	1
R	Q	2
S	P, R	4
T	P	6
U	S, T	3

duration(in weeks) of the activity S without delaying the completion of the project is _____

[Gate 2019]
